

Telesoft AI Cyber Analyst

Human Expertise. Machine Speed & Scale.

Elevate Security Teams above Basic Tasks & Streamline Security Operations.

Security tools used by business are generating large volumes of data, making it difficult for cyber security analysts to effectively manage detection, alerting and response to cyber threats. Security teams need enhancement.

Telesoft AI does the heavy lifting and gets customers actionable insights, helping them to focus on incidents that really require follow up:

- **Streamline security operations** - Telesoft AI presents findings in a clear readable, human understandable narrative that outlines all relevant stages of the attack lifecycle, as well as its own investigation process it makes reporting a simple, uncomplicated process even when it is a complex incident that needs to be shared with executives, board members or legal authorities
- **Integrates with your ecosystem** - Telesoft AI integrates with tools across your security stack allowing investigations to be triggered from third-party sources. The rich context and insights of Incident reports can be exported to SIEM, SOAR or ticketing systems to enhance existing work flows

From day one, Telesoft has helped us to significantly improve our cyber security posture and our ability to be more proactive with our cyber defences. Their responsiveness, attention to detail and ability to find "needle in a haystack" type events is testament to their cutting-edge technology coupled with their skilled analysts and innovative AI capabilities. We can highly recommend Telesoft and their services to any organisation looking to improve their cyber resilience.

- Andy Scott
Head of Information & Cyber Security
GSMA

AI-Driven Security Across your Entire Organisation

- Orchestrate security workflows across your entire ecosystem
- Automate repetitive tasks and incident response procedures
- Leverage AI and ML models for rapid anomaly detection & response
- Integrate seamlessly with firewalls to automatically block malicious domains
